

HA Elite™

HA Elite™ Food Supplement Softgels providing 140mg of ultra low molecular weight (50,000 daltons to 200,000 daltons) Hyaluronic Acid. The typical weight of HA ranges from 1 to 1.5 million daltons. A dalton is an arbitrary unit of measurement used in science.

Hyaluronic Acid (HA) is an essential component of skin cells. Epidermal HA is in abundance when we are young but as we get older it begins to steadily migrate away from the epidermis. A reduced level of HA is thought to contribute to the appearance of dry skin.

Supplementing with HA is thought to help moisture retention which may help reduce the appearance of age lines and wrinkles. HA Elite™ by PURE-XP is an ultra low molecular weight formula specifically developed to help with this process alongside a balanced and varied diet. HA Elite™ by PURE-XP provides a quality of HA that is the perfect companion to help maintain healthier looking skin.
